Rolling shutters in aluminium or steel
Synthesis of functionality and flexibility
Novoferm International

Novoferm is part of the Sanwa Group. Founded in 1956, now with annual sales in over 60 countries totalling more than €2 billion and with more than 8,700 employees, Sanwa is the world’s largest producer of metal door systems. Sanwa provides everything from: industrial doors, fire protection doors, garage doors, roller shutters and automation. Our products are used around the world in industrial, commercial and residential applications.

For over thirty years Novoferm has specialised in many forms of access systems for industrial, commercial and residential buildings. With a wide choice of different designs, finishes, operation and installation possibilities you get a bespoke solution every time. We take care of the complete process from technical advice to solution development, production, assembly and support on site. All aspects of the project including complete compliance with all relevant standards and legislation are always kept sharply in focus, which saves you a great deal of work.

In addition to industrial doors, draught excluding and fire-excluding doors, Novoferm has a full range of Dock Equipment. Our modern dock levellers and shelters guarantee efficient and draught-free loading and unloading of freight vehicles.
Security tested
All our rolling shutters have the necessary certifications and have been security tested to most standard sizes. Included within these tests, are the direct drives with integrated fail-safe devices which is an important section of the standards to which our doors fully comply.

Individual and universal
Our rolling shutters can be supplied in standard sizes or special sizes to suit your specific needs. All products supplied conform to the latest directives and standards. The profile design and high quality clear varnish coating of the aluminium shutters makes your rolling shutter the calling-card of your premises. Painted surfaces are also available on request.

European safety and security standards
In accordance with the European EN 13241-1 standard, industrial doors must meet a large number of safety requirements. These focus on preventing that people and goods should not suffer injury or damage when the door is used. The risk of being trapped must be limited to a minimum and a door may not suddenly free fall because a cable or spring has broken or because the motor or controls have failed.

Novoferm develops and produces the doors in strict compliance with these standards. Needless to say, we can provide the relevant certificates and test reports.
**Rolling shutters**

**Type overview**

**TH100 Rolling shutter**
Double skinned thermally insulated profile in **Natural aluminium** with **clear varnish finish** as standard, or with a **painted coat** finish on request. Also available with window profiles. Aluminium end profile natural-untreated.

**TH80 Rolling shutter**
Double skinned thermally insulated profile in **Natural aluminium** with **clear varnish finish** as standard, or with a **painted coat** finish on request. Also available with window profiles.

**V80 and V80 L Rolling shutter**
Single skin profile in **natural aluminium** or **galvanized steel** as standard, also available with a **painted coat** finish on request.

**Rolling shutter curtain**
The profiles are produced with interconnecting hinge quirk sections (for greater detail see page 6 & 7), these sections have a water-draining performance. The roller shutter curtain is fixed to the drum. All floor seals have a good degree of flexibility to compensate for irregular floor levels. **TH80** and **TH100** profiles are secured against displacement/lateral movement by the inclusion of end locks, **V80** profiles are secured in the hinge area.

**Technical details**

**Direct drive (standard):**
Low maintenance, completely oilsealed, encased worm-drive safety gear, attached directly to the steel shaft of the drum, with clearly reduced installation and maintenance effort compared to other alternatives.

Integrated fail-safe device low maintenance, self-checking and independent of position, as well as an encased limit-switch unit flanged directly onto the gear, with precisely adjustable final and safety limit switches.

Emergency manual crank or fast-action hand-operated chain-hoist for manual operation in case of power failure. All electric connections can be plugged into the drive. Operating voltage 400 V three-phase a.c. current. TÜV & VDE tested.

All of the rolling shutters presented here comply with the requirements of EN 13241-1.
Rolling shutters
Guide rails / Bottom beams / Sealing

FS1 guide rail
for rolling shutters V80
can be used in welding and bolt on construction installation types, and come standard with low-wear plastic strips for noise reduction.

FS2 guide rail
for all our rolling shutters
Guide rail of galvanized steel, with attached plastic strips, also with side sealing, possible installation methods: welding or without welding using steel connectors.

Side seal for FS2 guide rail
Countering heat loss and draught, plastic strips provided on shutter inner side with brush seal.

Technical details

Sprocket chain wheel drive with fail-safe device (special dimensions):
Low maintenance, completely oilsealed encased worm-drive safety gear with integrated limit-switch unit, including emergency manual crank or fast-action hand chain-hoist – as described in case of direct drive, however with the necessary sprocket chain wheels of steel and the appropriate roller chain for the power transfer from the drive to the drum roller.

For this, the TÜV approved fail-safe device is required; this prevents the door-leaf from dropping down, even in case of failure of the supports.

Drum construction
Primed steel construction, 168mm minimum drum for improved winding of the door curtain, with a 1/500 distortion along its length.

Drum bracket
This can be fixed using anchor bolts, screw through or welding. In the case of welding the bracket is fastened against the on-site steel under-structure or pre-installed anchor plates, according to our alignment plans.

Self-aligning ball bearing
Heavy-duty dimensioning for the connection of the drum, placement on brackets.

Emergency control
from floor level, with emergency hand-operated chain-hoist.

Installation / Electrical installation:
Our installation conditions are coordinated to the main existing standards. According to these, the installation and connection of all electric parts, in accordance with our circuit diagrams, as well as the power supply and wiring system of the parts with respect to each other with the necessary lines, are services provided on-site.

Main fusing and lockable main power switch normally provided by the customer, can also be installed.

Note:
The following alternative is also available:
• Electrical drive for alternating current, 230 V operating voltage
The NovoSpeed **Alu R** is a high-speed exterior door with TH80 profiles that offers good insulation and burglar resistance.

### Product Benefits

- class 2 wind resistance (EN 12424) up to a door size of 5 x 5 m.
- frequency control included as standard
- compact size for easy installation
- U-shaped side guides
- supplied in the following colours as standard:

### Alu R | TH100 | TH80 | V80

#### TH100 Natural aluminium

100mm, double skinned lath aluminium lath. A more conventional profile section, approximately 23mm thick. With thermal-insulating polyurethane, non-plasticized foam core with adhesive-free connection with the shell, thus providing a high level of surface stability.

THGL100 Aluminium glazed

Aluminium lath with double glazed windows, double-walled plastic inserts (opaque), a maximum of 10 lath sections with windows per rolling shutter, Surfaces as TH100.

#### TH80 Natural aluminium

80mm, double skinned lath aluminium lath, approximately 20mm thick. With thermal-insulating polyurethane, non-plasticized foam core with adhesive-free connection to the shell, providing the highest level of surface stability. The especially developed profile section formed in high-quality optics, enables significantly tighter winding of the door curtain, allowing lower headroom requirements.

THGL80 Aluminium glazed

Aluminium lath with double glazed windows, double-walled plastic inserts (opaque), a maximum of 5 lath sections with windows per rolling shutter, Surfaces as TH80.

#### V80 Natural aluminium or steel

Single-skinned 80 mm lath with classic profile, available in two different metal structures: 1mm or 1.25 mm thick, weather-resistant, natural aluminium, or alternatively in, 0.75mm or 1 mm thick, steel with galvanized surface.

V80 L steel

Single-skinned ventilation lath, available in steel only, 1 mm thick, with 5 mm perforations, allows approximately 25 % air passage. Standard finish galvanized. Paint coat option on both sides at additional cost. End profile natural aluminium (untreated) as standard.
Rolling shutters
Colour options

Individual and exclusive
All Rolling shutters are available spray painted on one or both sides. This is an option at additional cost. Maximum door size 6000mm x 5000mm. All doors will have the bottom lath supplied in natural aluminium (untreated) as standard.

Also available in the following pre-coated colours as an option. The RAL colors shown below may vary from the actual RAL colors.

Profile sections are also available painted in a wide range of RAL colours.

The finishing touch of your building
Rolling shutters
Operation

Deadmans control
The simplest control is what is commonly referred to as the deadman’s control. The door will open after pressing the “Up” push button once. The “Down” push bottom must be constantly pressed to close the door until the door has completely closed. If your finger is removed at any time during closing, the door will stop.

Impulse control
The door will open fully after pressing the “Up” push button and the door will again close fully when the “Down” push button is pressed with regard to impulse control.

Automatic closing after an adjustable time delay setting
Automatic closing after an adjustable time delay setting is only possible in combination with a safety edge and safety beam protection in the doorway.

Expansions
- Remote control (up to 99 channels)
- Traffic regulation
- Interlocking on both sides with another door(s)
- External operation components such as radar, key switch, induction loop, etc.

Available controls and accessories (at additional cost)

- Push button set
  - Up-Stop-Down (construction)

- Manual transmitter
  - 2 or 4 channels

- Safety photocell with reflector

- Up-Stop-Down push button set
  - Key switch (construction)

- Pull switches (construction)

- Induction loop detector
  - In separate housing

- Push button (construction)

- Flashing light

- Traffic light
  - Red/green
Rolling shutters
Installation examples and applications

Logistics companies
Rolling shutters traditionally guarantee secure and smooth work sequences in logistics companies.

Special structures
available at additional cost.
With our expertise, we also offer diverse and individual special solutions for unusual situations and special customer preferences.
Rolling shutters
Installation examples

Automatic servo lock
Bolts engage automatically on both sides every time the door is closed. The rolling shutter curtain is securely locked into the door frame by laterally extending steel bolts. (Not possible on rolling grilles.)

Lintel seal for V80 / TH100
countering heat loss and draught:
- V80 with perlon brushes
- TH100 up to 5 m width with rubber lip seal, 5 m and wider with perlon brushes.

Lintel seal for TH80
countering heat loss and draught: through TH80 louver with fixed integrated plastic seal.

Vertical facia panel
required when no lintel exists. Panel from same profile sections as the shutter door leaf, stationary, mounted in steel frame, alternatively bent galvanised steel plate.

Horizontal facia panel
required when lintel is set back. Stationary panel, made of bent galvanised steel plate, according to shutter type either single-walled or insulated.

Improved security and useability

Burglary protection
Protects against the lifting of the shutter curtain, with lock cylinder, hand-grip, side locking bars and electronic safety switch included for on-site installation.

Accident prevention contact strip
A contact strip is fitted within the bottom rubber profile of the curtain, this causes an instant stop if the closing shutter encounters an obstacle; then the shutter door opens to relieve the impact pressure. This is generally included in case of automatically operated shutters, otherwise on request.

Personnel entrance door
Standard size 875 x 2000 mm, for personnel traffic in case of closed shutter, fixed side section (approx. 1050 mm total width).
A side door in the fixed or pivoting side section can also be filled with profile sections, with visual similarity to the rolling shutter.

### One producer and one supplier

Novoferm does not just supply industrial doors but offers a full range of draught excluding products, multifunctional wicket doors, fire doors and dock equipment. A Novoferm quality product fits in every opening of a modern industrial building. Doing business with one partner has the following advantages:

- Only one point of contact for all products, installation, maintenance and after sales;
- Products that have been produced to match;
- Product delivery will take place in the correct order automatically;
- Engineers who are familiar with all products.

Novoferm NovoDoor Solutions
- sectional doors
- roller doors

Novoferm Docking Solutions
- levellers
- shelters
- closing seals
- full loading docks
- air locks

Novoferm NovoSpeed Solutions
- fast action roller doors
- roller shutters
- swing doors
- strip curtains

Novoferm Garage doors
- sectional doors
- tilt doors
- sliding garage doors
- doors for garages

Novoferm, always close by wherever you are in Europe.

The Novoferm Group is a leading manufacturer of industrial doors, pass doors, steel door frames and drives. We offer an extensive range of products to consumers and businesses. All of our products are designed and produced to the highest quality standards using state-of-the-art technology. We also guarantee optimal functionality and innovative design. Production takes place at several manufacturing sites in Europe and an extensive dealer network ensures that local support and advice are always available.
